SILVO KAČAR

Vertigo Bird was founded and is run today by Silvo Kačar, also founder of Arcadia Lightware, one of Slovenia's most successful lighting companies, where the idea for Vertigo Bird was born. With years of experience in the sales, planning and implementation of lighting solutions, Silvo well knows the problems and the needs of the lighting business. Vertigo Bird is the result of his dreams, passions, creative inspiration and ideas toward the ongoing development of quality, timeless products. Today Vertigo Bird operates as an innovative, independent company with its headquarters in Ljubljana.

Vertigo Bird works in close cooperation with various Slovenian and international designers, combining the business experience and talents of renowned creators with the creative energy and originality of a young group of emerging designers. The result is a lighting collection that remains true to our principles of simple forms and smart design solutions.

# DEMIJOHN

Design: Arne Vehovar

Arne designed the Demijohn, an intuitive continuation of Vertigo Bird's quest to take everyday objects and turn them into sources of illumination. The inspiration for the Demijohn stems from bottles; the largest and most deliciously curved ones were most often filled with intoxicatingly delicious liquids, diffracting the late afternoon light of lazy summer days and ending as a glint in the eyes of those enjoying the bottle's contents. The simple shape, consisting of two ubiquitous materials, wood and metal, appears to change throughout the day and only fully reveals its true form once night falls. That is when the fixture reveals itself in a medley of soft, warm light on natural wood. The use of thin sheets of natural veneer results in every lamp being slightly different from the next.

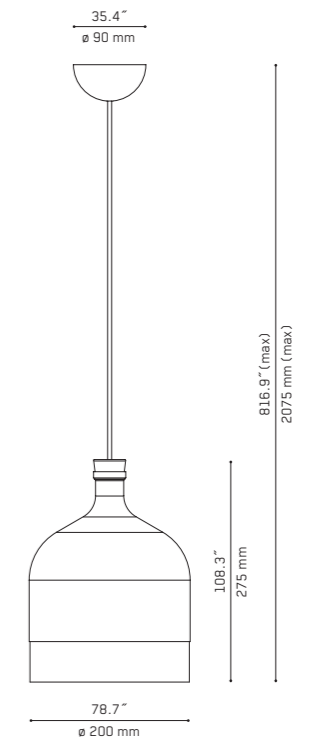

Year of design: 2017

Material: spun aluminium, veneer  
Colours: black, white/light spruce

# FUNNEL

Design: Bevk Perović Arhitekti

The lamp's design owes its form to the funnel, a highly typical household object, something all our grandmothers used in their kitchens, bottling and decanting wine, olive oil and similar throughout their lifetimes.

While a familiar object it's also been transformed into a new one, hanging above the kitchen or dining table as a recognizable, iconic light source – a small funnel that serves as a ceiling rosette, a large one casting light onto the horizontal surface below.

The same elements are further transformed into table and floor lamps, with a large pivoting funnel shade that allows for specific directing of the light.

A tube-like ray of light projects up and out of the top of the shade, creating a playful dot on the ceiling or neighbouring walls.

Babel

# BABEL

Design: Fabien Dumas

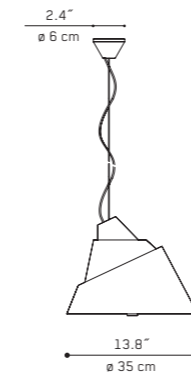

Inspiration for the luminaire Babel, designed by Fabien Dumas for Vertigo bird came from the biblical story about the Tower of Babel. You can turn every single shade and when you do, the shape and angle of the light changes. Furthermore, you can change the angle of light from the side or from the zero position. It turns very smoothly just by one touch, without an engine inside.

The complete range of pendant lamp in three sizes diameter 35/50/70 cm are all available in black washable textile. Light source compact fluorescent bulbs E27/15 W.

Year of design: 2014

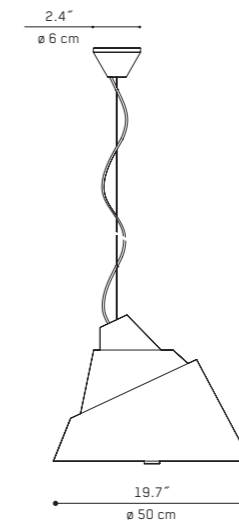

Material: textile, acrylic

Colours: black

# TREELIGHT

Design: Bevk Perović Arhitekti

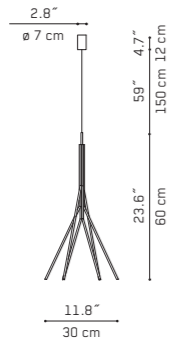

Treelight is a lamp surprisingly related to its name - a series of thin 'branches', bunched together into a seemingly random configuration, to be suspended, single or in groups, over our dining or meeting tables. Tips of branches, equipped with minute LED source lamps, evoke the feeling of joy and celebration - exactly what we use our dining tables are for - a celebration of life together.

Easy to install and assemble as well as lightweight, Treelights are a fun substitute for the heavy chandeliers of our grandmothers - still, with their strong and (sometimes) colourful character, they retain the ability to establish the idea of 'centrality' within the confines of our homes and offices.

Existing in two sizes and three colours, they are easily combined into collective configurations, acting as large chandeliers, or used as single lamps. The sizing is suited for both home and office use, as well as for bars and hotel lighting.

Year of design: 2015

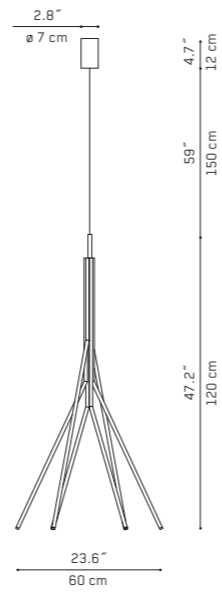

material: aluminium

# SLIM TOO

Design: Bevk Perović Arhitekti

Once again, the simplicity is the main theme of Slim too lamps. The direct, raw quality of 2 different aluminium profiles housing LED light source, as well as electronics, creates a light that is minimal, discrete and 'anonymous', and at the same time very 'present' in space.

Suitable both for office or home use - as our homes increasingly become our offices, and vice versa - Slim too exists in different sizes and colour schemes, allowing for customization.

The floor and vertical suspension versions are in the works, as well as more, limited edition colour combinations, to be announced soon.

Year of design: 2015

-

Material: aluminum

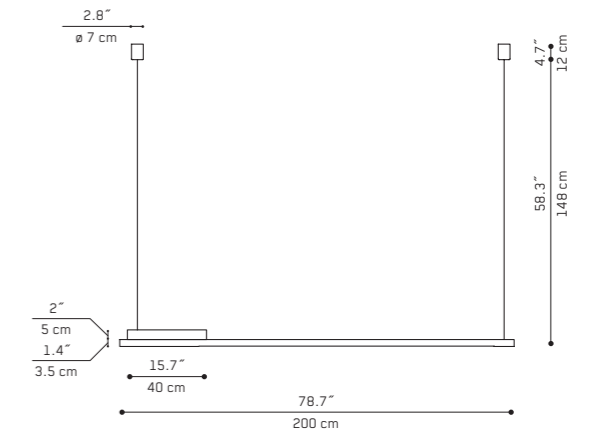

Colour: black, white, gold

## SLIM

Design: Bevk Perović Arhitekti

The magic of these arresting, elegant lamps is simplicity. The lamp forms a minimalist narrow beam of light and two graphic lines: one rigid, one curved. The design goal for the Slim lamp was to merge a standard fluorescent tube with the ballast module into a single object. The ballast module is housed in a bottle-like extension of a metal pipe, which is laser-cut for optimal light emission. The result is a lamp with a monolithic and dignified appearance with an unusually slim body.

Slim can be used as a vertical-suspension lamp, floor lamp, or standard horizontal office lamp. The direction of the light beam can be regulated by hand. The lamp shade can be adjusted by 20 degrees.

The vertical pendant lamp doesn't require any electrical connection on the ceiling because it feeds from a wall socket. Slim can be used at home, in the office, or in public spaces.

The Slim horizontal suspension lamp won the 2009 Red Dot Product Design Award.

Year of design: 2008

# HÄGAR

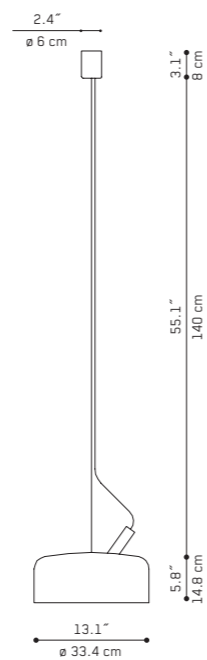

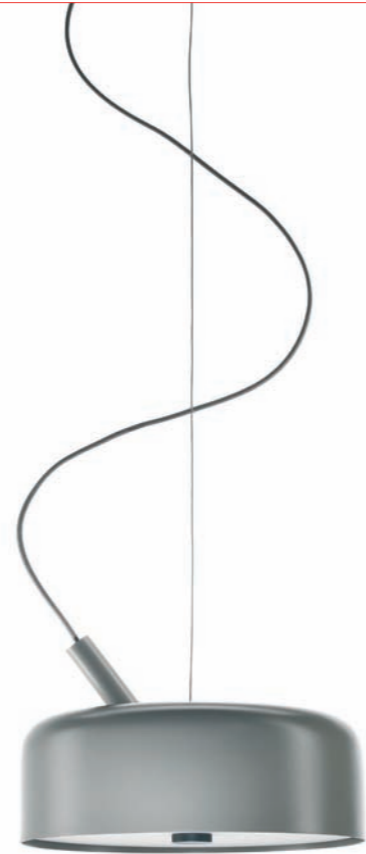

Design: Bevk Perović Arhitekti

Hägar, existing in two sizes, is a reworking of a standard, traditional spun-metal kitchen table light. It is redefined through the addition of a 'horn' - a metal tube that 'guides' the electricity cable into the fixture. The textile electric cable and its 'horn' become the lamps 'ornamental' feature - its true character.

The lights can be used as single and in groups, with a choice of different colours of textile cables soon available.

Year of design: 2015

material: aluminium, acrylic  
colour: white, grey

## KAT

Design: Smoke Detektors

The KAT line consists of two different entities; KAT big with a diameter of 330mm and KAT small with a diameter of 220mm. Due to the harnessing of LED technology, each size comes in a 20W (2000lm) and 30W (3000lm) version. The true value of KAT fixtures stems from the various solutions it can be fitted with. Ranging from a simple ON/OFF switch to autonomous backup-lighting mode in case of blackout with a three-hour power reserve, there isn't a task KAT lights cannot excel at. The combination of two brightness settings allows the light to remain turned on at a lower-intensity setting until the built-in motion sensor activates, providing full illumination when needed(double switch). The affordable price point allows for the mounting of KAT fixtures in the hallways of multi-residential buildings and in the utility spaces within a house.

Year of design: 2017

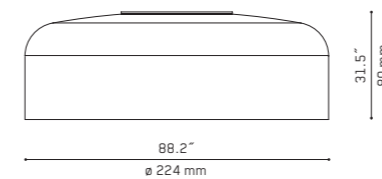

Material: aluminium / acryl diffusor

Colours: black,white, orange

# NAKED COLLECTION

Design: Smoke Detektors

Naked collection is a series of 'stripped' down, almost 'generic' lamps that we all seek for our houses and projects but can never find.

All the versions of the Naked collection revolve around the idea of a light source, covered with the simplest and most obvious monochromatic 'body', serving as a shade. These are lamps that use basic, minimal forms to cover the technical cores (light sources) of minimal design, that will sit unobtrusively in any environment, providing good quality professional lighting without being overdesigned. At the same time, they can also be seen as precisely defined objects that are simple but simultaneously a bit 'special' as their 'nakedness' is becoming an unusual quality in today's world of 'objects of design' that define our everyday lives. Naked collection is a small family of lamps which can 'live' and 'work' together, in clusters and series, but can also have their separate lives as singular objects. They come in many sizes and types of light, in order to be useful for everyone, everywhere.

Year of design: 2011

Material: aluminium  
Colours: white, black

# NAKED ON TRACK

Design: Smoke Detektors

Naked lamps use basic, minimal forms to cover the technical cores (light sources) of minimal design, that will sit unobtrusively in any environment, providing good quality professional lighting without being overdesigned. At the same time, they can also be seen as precisely defined objects that are simple but simultaneously a bit 'special' as their 'nakedness' is becoming an unusual quality in today's world of 'objects of design' that define our everyday lives. They come in many sizes and types of light, in order to be useful for everyone, everywhere. Now available also on track system.

Year of design: 2012

Material: aluminium

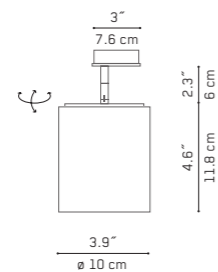

Colours: white, black

# SAX 200

Design: Alain Monnens

Lamps from the Sax family represent an alternative to all surface-mounted downlighters. Its 26 different variations cover the entire spectrum of lighting-design requirements. The choice of different light sources means that this model also boasts a wide range of applications. Following the latest trends in energy efficiency, Sax offers a choice of five different light sources in seven different variations, from 12V or 230V spots for mood lighting to fluorescents for general lighting purposes. Sax comes in three standard lengths and two standard colours: black and white.

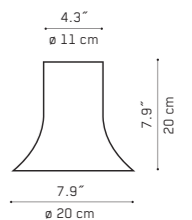

Year of design: 2009

Material: aluminium

Colours: white, black

### Specifications

# BIKINI

Design: Bevk Perović Arhitekti

Designed to fit into corridors and hallways, bathrooms and lobbies, Bikini is yet another Vertigo lamp that 'celebrates' the light source itself: a large oval refractor frames the old fashioned but still loved bulb form.

Usable as a singular lamp or arranged in groups (equally attractive in random or orderly arrangements), Bikini is the light we always need: simultaneously designed and undesigned, simultaneously small (bulb) and large (shade).

Simple and straightforward, it fits everywhere.

Year of design: 2011

# BORDERLINE

Design: A + A Cooren

Two shells are joined to form a borderline between dark and light, shade and diffuser. They're bound by three velcro bands, leaving the shell edges free of metallic joints. When the lamp is on, the inner white shell diffuses a soft, comfortable light, while the indirect light emitted from the top gives the impression that the lamp is floating below the ceiling. The contrast of black ABS outside and opal white acrylic inside is striking even when the light is off.

The three elements – shade, diffuser and velcro tie bands – are clear and visible features in the design and make the lamp easy to maintain. No manual is needed to change the bulb. Two standard versions of 616 exist: one for use with 60 W fluorescent lamp and the other for use with dual 60 W and 55 W fluorescent lamps for extra illumination, enabling the use of Borderline in different spaces.

The Borderline family of lamps includes floor, suspension and ceiling versions.

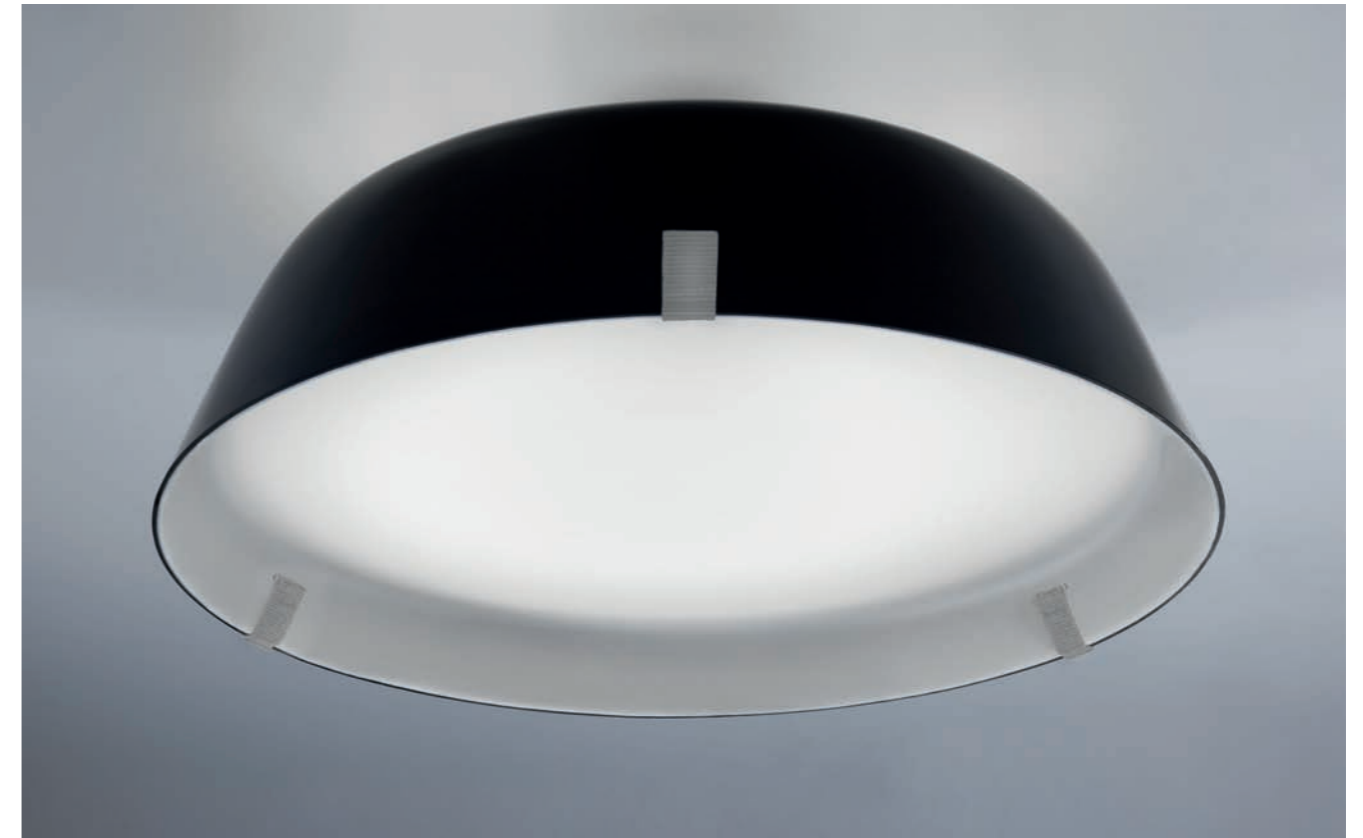

Year of design: 2009 - 2010

-

Material: acrylic

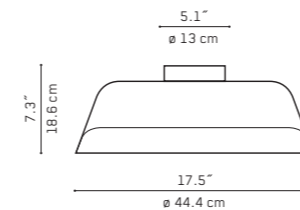

Colours: black/white, white/white

# BORDERLINE LONG

Design: A+A Cooren

Following the design of the Borderline family, Borderline Long offers efficient, yet soft light.

This long form perfectly compliments the existing circular Borderline, and is suitable for a long wall in an office or a shop.

As with the other lamps in the Borderline family, there is no need for a manual nor a screw driver for re-lamping. Simply remove the Velco strips.

Two shells are joined to form a borderline between dark and light, shade and diffuser.

The shells are bound by Velcro strips, leaving the shell edges free, making the lamp easy to maintain.

Neither a manual nor a screw driver is needed to change the bulb.

The inner white shell diffuses a soft, comfortable light, while the indirect light emitted from the top gives the impression that the lamp is floating below the ceiling.

Available in ceiling and suspension version.

Year of design: 2012

Material: acrylic

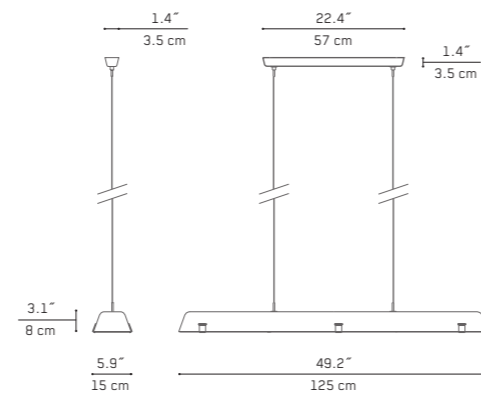

Colours: black/white, white/white

# LANTERNA

Design: Bevk Perović Arhitekti

A portable table/floor light, intended for indoor use, a lamp to carry around the house and place anywhere you like – much like the traditional kerosene lamps our ancestors lit and carried through history.

A small, light lamp with a distinct character. The handles used for carrying it around describe the form of the everyday lamps of our time – the familiar triangular and the square. A contour that reminds us of standard, anticipated shapes, shapes we all know and recognize – turned into a functional handle and simultaneously into an ornamental element as well, giving the lamp its strong presence.

Lanterna is equally at home on the kitchen table, the living room floor or used as a bedside lamp. Fixed or portable, in discreet white or bold colours, Lanterna imparts 'specificity' to all of our living environments.

Available in 2 shapes, and 2 colour schemes

Year of design: 2010

Material: metal, glass

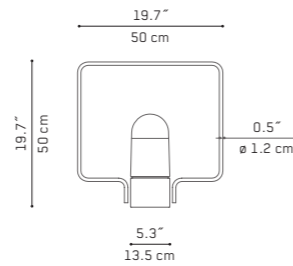

Colours: black, white

# SMOKE COLLECTION

## FACTORY, HOUSE

Design: Bevk Perović Arhitekti

100% recyclable, 100% ironic, 100% iconic

Prototypical elements of suburbia transformed into central elements: icons for our homes.

The Smoke collection is a series of floor lamps based on scaled-down prototypical elements of suburbia – the factory, the house – isolated from their natural context and transformed into iconic additions for the home or office, belching "smoke", illuminating spaces and more. Floor lamps meant to light up living and working environments – to be useful and critical simultaneously – comment on our everyday lives, surrounded by pollution and consumption. Smoke lamps are a picture of our world transformed into a source of light, but they're also a source of happiness and joy, around which the rituals of life can take place. They're big enough to be used in both private and public spaces and are able to function independently or in combination in groups as small urban designs, emitting light through recyclable and easy-to-maintain Tyvek® "smoke" shapes.

Year of design: 2009

-

Materials: computer-cut and welded metal, Tyvek® diffuser, Velcro®

# BALLOON

Design: Uli Budde

Balloon owes elements of its form to the typical antique oil lamps and candle holders with a reflector placed behind the flame to reflect and direct the light. Besides, the natural occurrence of what we often consider the moon to be a light source (next to e.g. fire and the sun) although it is just a reflected light from the sun, gave further stimulus to work with idea of the indirect light. CFL reflector is situated inside lamp's cylindrical base. Light shines upwards and enlightens the reflector, which tilts forwards, re-directing and reflecting a diffused glimmer of light. Through its simplicity and figurative character, the lamp leaves room for associations and fantasy - is it a balloon soaring into the air, a small glowing sun or an oversized light bulb?

Year of design: 2010

# CONCIERGE

Design: Kaschkasch

The idea behind this lighting concept is to combine a very atmospheric/ indirect light with a super functional and turnable, in all direction spotlight, which can be used for example for reading or illuminating the wall. This project has a very cute, but strong character. Combined with a slot which shows it's functionality. A good combination of function ad aesthetic – as usual for kaschkasch :)

Year of design: 2017

Material: aluminium  
Colours: black, white

# KOKESHI

Design: A+A Cooren

Inspired by the Japanese traditional wooden toy, Kokeshi is a beautifully considered object which emits a smooth and comfortable light.

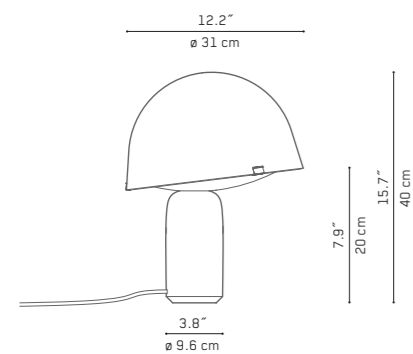

This versatile interior piece may stand by a bed, on a table, or on a cabinet.

The head of Kokeshi glows with an intense light radiating from its face.

The wooden body brings to mind the warm human touch of this traditional toy.

Year of design: 2012

Antenna is a delicate statement - a fragile and minimalist expression of the desk lamp, a poetic simplification of task lighting. The surprise is in the way that Antenna telescopes apart, pulling up to light the table, pushing down to highlight the keyboard or page, rotating and turning to accent a picture on the wall. Some would argue that the once ubiquitous telescopic aerial is an endangered species, an instrument made obsolete by technological progress, but Antenna's knowing reference to an analogue heritage of pre-digital cars, FM radios and portable TVs is married to silent-butler state-of-the-art technology to make a truly fresh and modern statement. The simplicity and fragility of "Antenna" belies the lamps technical sophistication.

Year of design: 2012

Material: metal  
Colours: black

# MANTIS

Design: Böttcher+Henssler

MANTIS is an elegantly simplified variant of the iconic desk lamp, made of lightly stained solid maple. The lamp uses energy-saving LEDs placed with precision to provide a natural like warm white light emanating from a hollowed out wooden fixture. The simplified usability comes through in the mechanical principle which relies on gravity to fix an aluminum tube that has been inserted through a wooden stem attached to its base. With this minimalist principle in mind one can effortlessly swing and adjust the height displaying the intended delicate balance, lightness and playfulness of the design. In its symbiosis of clear lines, the natural character of the wood, the colourful accent of the textile cable and coated aluminum tube, MANTIS is a timeless piece to compliment any modern home and office interior.

Year of design: 2010

Material: wood / metal

Colours: colour of wood: light white / colour of metal: blue
